

#### ABSTRACT OF THE DISCLOSURE

The present invention relates to a battery apparatus used as a power source for a mobile phone unit and other electronic equipment, in which in a storage portion formed by overlapping a battery storage and a lid, a battery unit containing a power-generating element is stored.

The battery apparatus according to the present invention includes: the battery unit containing a power-generating element, the battery storage having the storage portion in which the battery unit is stored, and the lid that closes the end of an opening of the storage portion of the battery storage, wherein a first fixing element for enabling the lid to be engaged with the battery storage and fixing the lid to the battery storage is provided.

According to the present invention, the lid is fixed to the battery storage through the first fixing element, so that with a simple structure the battery storage and the lid can be reliably fixed to be integrated, and by forming a thin lid a capacity of the storage portion increases to the extent of reduced thickness, whereby a capacity of the battery unit increases corresponding to the increase in capacity of the storage portion and the amount of power can be increased.
